

Athinais Multiplex

1999 - 2001

Introduction

Being responsible for all E/M works, together with other colleague civil engineers & architects, we undertook the **project management** for the **construction** of all building installations for a new multicenter in Athens by the name: "Athinais"

The project was about the construction of several independent multipurpose buildings and large surrounding areas, both fully

coordinated with the special architectural style of the historical area of Votanikos, where the plot was situated.

The new buildings replaced the existed old factory of "Athinais" that operated there since the early 20th century and it was its planning and design that the new construction was based on.

Project description

Project: Multicenter "Athinais" in Athens

Task: **Construction & Project Management of E/M installations:**

- | | |
|---------------------|--------------------------|
